

## Teaching notes

Start with exercise 1 addsubmultdiv to check methods

Introduce new methods

Demonstrate and allow students time to have a go at the methods

Error analysis exercise in small groups – get groups to explain what they think the problems are and how they could help the learner to correct these errors making sure they can check any methods the learner may have used.

Give error analysis answers

Discussion time to ask questions and express opinions

Estimation exercise

Get learners to consider what maths skills would be needed for their students to complete the estimation exercises.

Get each small group to choose one of the examples and feedback to rest of the group – allow time for discussion

Recap session
